'Personal Data, Reflections and Control'

The world we live in is increasingly powered by huge amounts of data about our behaviour. Data-driven opportunities have the potential to improve public services and support new businesses, but they also threaten our privacy and autonomy. At The University of Southampton, we conduct world-leading research into how citizens can understand and control the ways that data about them is collected and used.

Wednesday 25th January

4-5pm in Advanced Physics at Bishop
Wordsworth's School
